Experience creating websites and web applications using HTML, CSS, JavaScript, External Frameworks and API's, jQuery, MySQL/Sequelize, Node/Express/Handlebars, PWA's and React, and MongoDB/Mongoose

Work History

The Boathouse - FOH Manager

Richmond, VA

06/2015 - 06/2018

- Hired, trained, scheduled, and managed staff while withholding company policy, standards, and expectations. This also included external guest expectations and ensuring the deliverance of excellence in service
- Controlled BLW costs and managed inventory and procurement of product
- Accurately reported end-of-day sales, and calculated labor costs, food costs, and alcohol costs

Delaware North - Multi-Unit Manager

Richmond, VA

06/2018 - Current

- Create PO's for the procurement of product that supplies nine total units. This product includes all F&B, paper product, and janitorial supplies
- Manages staff while withholding company policy, standards, and expectations
- Ensures a timely delivery of product through a requisitioning process from the commissary kitchen to each unit
- Review monthly inventory, which includes price updates, inputting of invoices, and inputting of sales and costs
- Create weekly waste reports to find issues with pars, misuse, or over-requisitioning. Create process improvements to limit the above mentioned

 - MVC / ORM
 - React
-

Education

Expected in 05/2020

University of Richmond

Richmond, VA

Certificate: Full Stack Coding Boot Camp

Projects

Box Office Depot

Box Office Depot is a web application that utilizes multiple APT's to display new and coming soon movies, movie theaters and show times, and allows the user to also search for theaters and movies. This was a group project that I worked on with three others.

<https://krpharr.github.io/box-office-depot/index.html>

Devour The Burger

Devour The Burger is a heroku deployed application that allows the user to post burger creations, and then devour them. All of the logic is stored in the database.

<https://obscure-sierra-44459.herokuapp.com/>

Lorenzo's List

Lorenzo's List is a heroku deployed application that allows the user to view and post items for sale, as well as message other users to contact about their items. All of the users and items are stored in a SQL database.
